available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, grg, or trg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cole, S.T., Brosch, R., Parkhill, J., Garnier, T., Churcher, C., Harris, D., Gordon, S.V., Eiglmeier, K., Gas, S., Barry III, C.E., Tekaia, F., Badcock, K., Basham, D., Brown, D., Chillingworth, T., Connor, R., Davies, R., Devlin, K., Feltwell, T., Gentles, S., Connor, R., Davies, R., Devlin, K., Feltwell, T., Gentles, S., Hamlin, N., Holroyd, S., Hornsby, T., Jagels, K., Krogh, A., McLean, J., Moule, S., Murphy, L., Oliver, S., Osborne, J., Quail, M.A., Rogers, J., Rutter, S., Seger, K., Skelton, S., Squares, S., Sqares, R., Sulston, J.E., Taylor, K., Whitehead, S. and Barrell, B.G.

```

```
len: 373 aa, from Mycobacterium tuberculosis strain H37Rv, (100.0% identity in 373 aa overlap). Probable citA (alternate gene name: gltA), citrate synthase 2 (EC 4.1.3.7), highly similar to others e.g.
CAB95899.1|AL359988 putative citrate synthase from Streptomyces coelicolor (387 aa); P39119|CISY_BACSU citrate synthase II from Bacillus subtilis (366 aa), FASTA scores: opt: 586, E(): 5.8e-30, (33.8% identity in 367 aa overlap); etc. Also similar to Rv0996|MTCY31.24 from Mycobacterium tuberculosis (29.2% identity in 274 aa overlap) and Rv1131. Contains PS00480 Citrate synthase signature. BELONGS TO THE CITRATE SYNTHASE FAMILY."
(99.9% identity in 882 as overlap). Probable transcriptional regulatory protein, LuxR family, highly similar (but shorter 238 as in N-terminus) to NP_30220.1|NC_002677 possible transcriptional regulator from Mycobacterium leprae (1106 as). Also highly similar (generally in part) to otherse e.g. T50568 probable multi-domain regulatory procein from Streptomyces coelicolor (1334 as); P10957|NARL ECOLOR (216 as), PASTA scores opt: 193, E(): 6e-06, (37.4% identity in 99 as overlap); etc. Also highly similar to others from an overlap); etc. Also highly similar to others from the control of the coefficient of the coeffic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /locus_tag="Mb0914c"

Coryneform bacteria transformed with (I) so that they overexpress the accDA gene which are useful in animal feeds, in human medicine and in the pharmaceutical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cloned Corynebacterium glutamicum accDA gene useful for producing transformed coryneform bacteria producing increased yields of L-amino acids, especially L-lysine -
